I am a skilled full stack developer capable of taking management discussions and quickly converting them into meaningful technical implementations. A bridge between management and technology.

Work Experience

Javascript Developer 1st Franklin Financial August 2024 - Present
Loan Origination Team   **Toccoa, GA**
- Improved readiness for the intake of customers in a new state leading to significant increases in customer base
- Completed work items at a rate of 27 PBIs each month
- Utilized Javascript to make updates and bug fixes to 1FFC's loan origination platform
- Adapted quickly requiring little active monitoring and training to become effective and begin presenting value to the development team

Project Coordinator   **1st Franklin Financial**   **March 2024 - August 2024**
EPMO   **Toccoa, GA**
- Created helpful visualizations and coordinated directly with 1FFC's CTO to improve visibility of key statistics to company executives
- Coordinated several technical projects and product enhancements leading to future technology readiness within the company
- Assisted in communication between highly technical teams and management to more effectively understand scope of work leading to increases in productivity

Undergraduate Research Assistant   **TReNDS**   **May 2023 - December 2023**
Large Language Model Team   **Atlanta, GA**
- Learned how to use high compute clusters to run large machine learning workloads (Falcon, Llama, Llama 2, Etc.)
- Developed two advanced chat-based applications utilizing Slack API, OpenAI API, and other technologies
- Collaborated closely with the Director of Machine Learning, gaining in-depth insights and knowledge in large language models

Shift Supervisor   **Campfire Mobile Coffee**   **June 2021 - March 2024**
Cumming, GA
- Diagnosed and resolved technical issues with essential equipment, ensuring operational efficiency
- Led the timely setup and deployment of the mobile coffee unit, enhancing customer service and satisfaction
- Implemented targeted marketing strategies for select beverages, boosting sales and customer engagement

Technologies and Languages

- Languages: Javascript, Python, Java, React Native, Bash, NodeJs
- Technologies: MongoDB, AWS, Git, MySQL, Postgres, Linux CLI, Anaconda
- Other: Data Visualization & Project Coordination

Education and Certifications

- **Certified Associate in Project Management,** Project Management Institute   **2024**
- **B.Sc. Computer Science,** Georgia State University, Atlanta GA.   **2020– 2023**

Projects

- **[Questboard](#)** - Personal project designed to hone web hosting and database skills. Utilized Postgre SQL, Linux, Nginx, and React Native to create a social media site where individuals could create several characters under one account to post under. The site allowed for posting of images, text, comments, and likes.
- **Meet in the Middle -** Final project for capstone course at Georgia State University. Utilized MongoDB, AWS, Google Maps API, and React Native to create an application allowing two individuals to create events and find convenient middle meeting points. The application ran on IOS, Android, and in browser allowing for maximum flexibility.
